

## types of manual testing:

- ① acceptance testing
- ② black box testing
- ③ integration testing
- ④ system testing
- ⑤ unit testing
- ⑥ white box testing

① acceptance testing: UAT is performed by client to confirm software meets the agreed requirements.

② black box testing: (behavioral testing)  
analyses the application's functionality from end user perspective -

③ integration testing: process of testing with 2 or more integrating components

④ system testing : testing the system as a whole - also called end to end testing

⑤ unit testing : individual units are tested to make sure each function performs as expected -

⑥ white box testing:

sometimes called transparent box testing. tests the internal structures.

performed by a developer.
